

"Methylation Revisited – Part 2 Identifying and Eliminating the Major Epimutagens to Optimize Methylation – Simply!"

Online Seminar - April 24th 9 AM - 2 PM EDT

This online seminar will focus on identifying and eliminating the Epimutagens that affect Methylation. Methylation is a major influence on Gene Expression. It is a Vital metabolic process that occurs in every organ, every cell; Billions of times per second. Life simply could not exist without it! Epimutagens are negative influences on Gene Expression. We will review what they are, and in this seminar, we will discuss how to identify them and provide recommendations to minimize their negative influence.

Identifying and Eliminating Epimutagens is vital for Optimal Health! In this seminar you will learn:

- The Microbiome
 - What it is and how to optimize.
 - The scoop on poop.
 - What is the Oncobiome.
 - The Gut-Brain Axis.
- Acid/Alkaline Balance. Why balancing pH is crucial and how to do it.
- Blood Sugar Regulation. Diabetes rates are soaring, learn what you can do to improve blood sugar.
- Stress. It affects us all; we will discuss how to help mitigate the negative effects.

A Step-By-Step Guide For When Your Trusted Protocols No Longer Work

Whether you are just beginning to treat patients, or you are a seasoned veteran, this seminar will greatly enhance your practice and your own personal health. This seminar is for clinicians who really want to take care of sick people and transform the lives of those they have the privilege of treating. What a great feeling helping patients with tough issues get better.

With a Clear Understanding of Methylation - Get More People Better.

Would you like to have improved clinical results and decreased expenses for your patients? How about increased patient referrals? Learn what you can do right away Monday morning to make a difference in your patients and the health of your community!

Gregory Peterson, DC, DABCI, FIAMA, FIACA, CCST is a chiropractor, chiropractic internist, certified chiropractic acupuncturist, clinician, clinical consultant and lecturer. He has completed over 400 hours of specialized training as a chiropractic internist and 350 hours of kinesiology training. He also draws on his diverse education in chemistry, physiology, nutrition and the health care field to offer a fresh, innovative approach to health. He applies up-to-date scientific and medically documented methods to bring you the latest and best information, procedures, techniques and treatment protocols.
