

INTRODUCING
The Vitamin D Collection

BY BIOTICS RESEARCH®

Biotics Research has a collection of vitamin D products clinically tested* to be safe, effective and easy to administer. One of the first companies to develop an emulsification process, Biotics Research offers its four vitamin D products in an emulsified form shown to increase bioavailability by over 200%.

"The Best of Science and Nature"

CLINICALLY TESTED*
 FOR SAFETY & EFFICACY

Bio-DK Caps™

Bio-DK Caps™ supplies 125 mcg (5,000 IU) of vitamin D3, 550 mcg of vitamin K (as K1 phytonadione and K2 menaquinone-7) as a micro-emulsion for enhanced absorption and utilization, particularly important for those with malabsorption conditions. In addition to emulsified forms of vitamins D and K, **Bio-DK Caps™** contains superoxide dismutase (SOD) and catalase.

Bio-DK-Mulsion™

Bio-DK-Mulsion™ supplies 125 mcg (5,000 IU) of vitamin D3 and 300 mcg of vitamin K (as K1 phytonadione and K2 menaquinone-7) in a micro-emulsion for enhanced absorption and utilization, which is particularly important for those with malabsorption conditions. Clinical data shows that the emulsified form increases bioavailability over 200%.

Clinical Study Findings at Boston Children's Hospital

In a clinical study, levels of 25(OH)D increased from 13.7 ng/ml to 41.2 ng/ml (202%) in a 6 week time period with 50 mcg (2000IU) daily of our emulsified vitamin D.
