Symptom Category - Chart

Your Symptom % Scores By Category

The above graph charts your symptom scoring by category. Each symptom category is scored as a percentage of total points. For example, if there were 24 possible points in a category, and your score was 12 (or half of the total possible), that symptom category would be graphed as 50%.

The value of this graph is that it quickly displays your most pressing symptom categories. Also, after the detox, it quickly shows which symptom categories may still need further attention. Work with your clinician to take steps further to get most (or all) of your symptom category scores down into (or close to) the green part of the graph.
